

## Facility Analysis

In order to accurately analyze a building or facility for treatment with Refrigerant Catalyst Technology we'll need to gather the following information:

### Electric Bills:

The greater amount of information we have on past energy consumption, the more accurate our analysis and estimates of energy saving can be. 3 years of energy bills is optimal but a minimum of 12 months of billing statements from your current electric provider are required.

### Equipment:

A list of equipment to be treated is required. This information should include the make, model number, and cooling capacity for each unit. This includes HVAC equipment, refrigeration equipment, and refrigerated trucking.

### Additional Helpful Information:

- Is the environmental equipment metered separately?
- Building square footage
- Hours of operation
- Maintenance records
- Age of equipment
- Fluid volume for chillers

The more accurate the information provide the better we can determine how RCT can help you and your facility. It is our goal to make this process as streamlined and easy for you as possible, however through discovery there may be times when additional information is required.

If you have any questions please do not hesitate to contact us.
